Oakes Road Fire Rescue Station No. 104

Davie, Florida

New municipal fire-rescue facility located in an industrial business district of the town. The project is located at one of the main entry points to the district across a retention lake and serves as a beacon for the area.

The project's most prominent features are its lighted tower and single plane curved roof. Functionally, this project maximizes the use of the very limited site and still allows for drive-through access for convenience and functionality.

The project houses a full-service fire and rescue company with accommodation of all shifts on site including the town's central dispatch.
